

# CSS Assignment: Layout & Styling Practice

 Level: Beginner

## Concepts Covered:

display, position, flex, grid transform (rotate, scale, skew)

Text properties (font-size, font-family, text-align, text-transform, text-decoration)

background-color, color, border

## Instructions

Create a simple Team Profile Webpage using HTML & CSS. You are expected to design and style the layout based on the guidelines below. You will write both HTML and CSS yourself.

## Assignment Tasks

Create a webpage that contains a main heading titled 'Meet Our Team'.

Create a section that displays three team member cards side-by-side (horizontally).

Each team member card should include:

- A placeholder image
- A name (e.g., 'John Doe')
- A role (e.g., 'Frontend Developer')
- A short description (1-2 lines)

Use Flexbox or Grid layout to arrange the cards in a row with spacing between them.

Apply a background color to each card.

Use different text colors, font sizes, and font families for headings, roles, and paragraphs.

Add borders around each card and apply padding.

Use transform properties on one or more elements:

- Slightly rotate the image
- Skew the team member's name text
- Scale one special card slightly larger than others

Position a small label (like 'LEAD' or 'INTERN') inside one of the cards using position: absolute.

Ensure your layout looks good on different screen sizes. (Optional: Use flex-wrap or grid-template-columns.)

### Rules

-  Do not use hover effects
-  Do not use pseudo-elements like ::before or ::after
-  Do not use animations or transitions
-  You must write your own code
-  Use semantic HTML and properly organized CSS

### What to Submit

index.html

style.css
